Ankara, Turkey

Research interests

Computer vision, computer vision for software engineering, autonomous systems, LLM security

Education

Bilkent University

Ankara, Turkey

B.S. in Computer Engineering (English-medium instruction)

Sep. 2024 – Jun. 2028 (expected)

SINTEF Digital

Jun. 2026 – Present

Research experience

Research Intern, supervised by Dr. Arda Göknil

Norway (Remote)

- Designed controlled comparisons of LLM system architectures for automated code review, holding task, dataset and evaluation fixed while varying only the architecture (single call, Plan-Act-Evaluate loop, two-agent detector/critic), and scoring each against ground-truth labels on accuracy and execution cost.
- Replicated a published multi-agent framework (arXiv:2505.10961) on a new detection task; when results diverged from the reported numbers, designed a diagnostic procedure to attribute the gap to either model capacity or my own evaluation code, by rerunning the original setup with the authors' post-processing.
- Tested whether the confidence signals such systems emit are trustworthy, comparing self-reported confidence against token-level logprobs on identical predictions.

Bilkent University, Dept. of Computer Engineering

Jan. 2026 – Present

Undergraduate Researcher with Asst. Prof. Anıl Koyuncu | [repo](#)

Ankara, Turkey

- Preparing a workshop paper as the sole student on a systematic literature survey of computer vision applications in software engineering, extending Bajammal et al. (IEEE TSE 2022).

Projects

Autonomous Surface Vehicle | *Teknofest 2026 USV Competition* | [repo](#)

Jan. 2026 – Jun. 2026

National autonomous marine vehicle competition, part of Turkey's largest technology festival

- Captained a 5-person team drawn from computer, electrical-electronics and mechanical engineering, running task coordination and sponsor outreach.
- Specified the vision and control software architecture in the design reports, covering HSV-based buoy detection and a mission state machine across a four-layer ROS 2 node structure (Raspberry Pi 4, GPS/IMU, LoRa/MAVLink telemetry, PID heading control).
- Authored the software sections of the technical feasibility and critical design reports; the team cleared the Technical Qualification Report stage and was eliminated at the Critical Design Report stage.

2D Parkour Game | *CS 102 Course Project* | [repo](#)

Feb. 2025 – Jun. 2025

Built a light-reflection puzzle module with ray tracing across mirror types, in a LibGDX grid environment

- Led report writing and team coordination.

Industry experience

Akdoğan

Aug. 2026

Engineering Intern

Cyberpark, Ankara

- Embedded systems and ROS 2 work on an autonomous marine vehicle platform.

Skills

Programming: Python, Java

Tools: Git, Docker, ROS 2, Ollama, DSPy, OpenCV, LibGDX

Coursework exposure: C++, MIPS Assembly, SystemVerilog

Languages: Turkish (Native), English (C1/C2), German (A2)

Extracurricular

Gazete Bilkent (university newspaper), Culture & Arts Editor

Nov. 2025 – Present

Bilkent University Formula 1 Society, Board Member

Feb. 2026 – Present
